

which OD algos work well, which ones don't?

Plan : Create best scenarios for an ML AD/OD Algo and analyze/report results.

Theoretical Flow of code :

1. Imports
2. convert TXT to CSV, split by words.
3. TF.Keras.Tokenizer (CSV)
4. Padding & Truncation
5. Conversion to tensor
6. Initialization of the model
7. Model(tensor) = Predict
8. Match Predict to lines in TXT
9. Output result
